On the Kaggle hypergraph, global consensus is structurally out of reach; dynamics are per-component
(a) Full population (n=670), converged 0%
mean opinion $\bar{X}(t)$
sweep t
ensemble mean
r = 80%
(b) Largest component (n=140), q=1.5: 33%
cumulative consensus (KM)
sweep t
q=0.5
q=1
q=1.5
q=2.5
(c) Final majority vs threshold
density
final majority share
full population
largest component
(d) Components freeze internally
fraction of components absorbed
nonlinearity q
